

Knauf Metal Profiles

01/2009

Knauf UW Channels

Galvanized lightweight steel sections fixed to structural ceilings and slabs to form the metal framing for Knauf W11 Partitions and Knauf W62 Wall Lining System. A unique profile design and embossment, enhances the stiffness of the sections and makes for easy identifications on site. Knauf partition metal sections are cold-rolled from high-grade galvanized steel, which complies with EN 10327. All Knauf metal sections comply with EN 14195 and DIN 18182-1.
